

Your #1 risk for breast cancer is being a woman

Breast cancer is the most common cancer in women in the United States. It is about 30% (or 1 in 3) of all new female cancers each year.

Breast cancer is the second leading cause of cancer death in women.

But there is good news

The risk of death by breast cancer is **reduced** by more than **40%** among women who have annual mammogram **screenings**.*

Make your breast health a priority

We know mammography works because statistics now show fewer women are dying today due to early detection and timely treatment.

When detected early, breast cancer responds better to treatment and greatly improves the chances for survival.

Our recommendations for women:

1. Begin annual mammograms at 40.
2. Women at higher risk should start earlier based on your physician's recommendations.
3. Listen to your body. If something doesn't feel or look right, get it checked.

Our Services

The Rose offers quality breast health care in the form of screening mammograms and diagnostic examinations. Screening mammograms are recommended annually for women 40 and older.

Our services include:

- 3D screening mammography
- 3D diagnostic mammography
- Bone density testing
- Breast ultrasound
- Cyst aspiration
- Fine needle aspiration biopsy
- Ultrasound-guided biopsy
- Stereotactic biopsy
- 3D Mobile Mammography Health Coaches
- **New:** Breast MRI
- **New:** SmartCurve Technology - a revolutionary curved technology shaped like a woman's breasts, providing a more comfortable experience during mammograms.
